Central Line Placement with Ultrasound

In today’s competitive and dynamic healthcare climate, it is critical to use your medical imaging systems to their fullest potential. Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment.

**Philips Ultrasound Point of Care 110**

This Philips Clinical Education workshop is designed for individuals looking to develop a cognitive and technical understanding of ultrasound guided central line access. It focuses on delivering the knowledge and practical skill for obtaining ultrasound images of the central vessels and the various approaches for needle access. Attendees will review the anatomy and sonographic appearance of the internal jugular, subclavian and femoral veins.

The course includes a lecture and a hands-on scan workshop where attendees will be able to perform ultrasound guided central line access on central line vascular phantoms using a standard central line kit.

**Prerequisite**
Must be a physician, nurse, medical student or qualified sonographer.
Central Line Placement with Ultrasound (POC 110)

Course Objectives
Upon completion of this course, the learner should be able to:

- Discuss the benefits and clinical indications for ultrasound guided central line access
- Review central vessel anatomy and sonographic appearance
- Explain the procedure of ultrasound guided central line access
- Review the key actions to be taken before, during, and after the procedure
