

**PHILIPS**

Clinical Education

## Basic Volume Imaging Manipulation Part 1: OB/GYN

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (vILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

### **Philips ultrasound general imaging 202VILT**

#### **About virtual instructor-led training**

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60-120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

# Basic Volume Imaging Manipulation Part 1: OB/GYN (GI202VILT)

## Course description

This 1.5 - hour Virtual Instructor Led Training (vILT) course is designed to provide customers the knowledge to perform basic volume imaging manipulations in the applications of OB/GYN. This session will cover manipulation of a uterine endometrium, uterine IUD, retroverted uterus, uterine polyp, ovarian cyst/follicle, fetal face, fetal foot, fetal spine and fetal palate.

## Course objectives

Upon completion of this course, the learner should be able to:

- Manipulate a uterine endometrium
- Manipulate a uterine IUD
- Manipulate a retroverted uterus
- Manipulate a uterine polyp
- Manipulate an ovarian follicle/cyst
- Manipulate a fetal face
- Manipulate a fetal foot
- Manipulate a fetal spine
- Manipulate a fetal palate

## Prerequisite

Advanced knowledge and understanding of system instrumentation and OB/GYN anatomy is recommended for this course.

If you are unfamiliar with volume imaging acquisition and the tools used to manipulate 3D volume data, please consider taking the GI201VILT - Ultrasound Volume Imaging Acquisition and Tools course prior to the GI202VILT course.

## Audience statement

This course is intended for sonographers as well as physicians who require additional knowledge of Basic 3D OB/GYN manipulation.
