

**PHILIPS**

Clinical Education

## Basic Volume Imaging Manipulation Part 2: Abdomen, Small Parts and Vascular

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (vILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

### **Philips ultrasound general imaging 203VILT**

#### **About virtual instructor-led training**

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60-120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

# Basic Volume Imaging Manipulation Part 2: Abdomen, Small Parts and Vascular (GI203VILT)

## Course description

This 1 hour Virtual Instructor Led Training (vILT) course is designed to provide customers the knowledge to perform basic volume imaging manipulations in the applications of Abdomen, Small Parts and Vascular. This course will cover manipulation of a carotid artery, normal kidney, normal kidney with Color, gallbladder, portal-hepatic system with Color, thyroid, breast cysts and a solid breast lesion.

## Course objectives

Upon completion of this course, the learner should be able to:

- Manipulate a carotid artery
- Manipulate a normal kidney
- Manipulate a normal kidney with Color
- Manipulate a gallbladder
- Manipulate the portal-hepatic system with Color
- Manipulate a thyroid
- Manipulate breast cysts
- Manipulate a solid breast lesion

## Prerequisite

Advanced knowledge and understanding of system instrumentation and abdominal, Small parts and vascular anatomy is recommended for this course.

If you are unfamiliar with volume imaging acquisition and the tools used to manipulate 3D volume data, please consider taking the GI201VILT - Ultrasound Volume Imaging Acquisition and Tools course prior to the GI203VILT course.

## Audience statement

This course is intended for sonographers as well as physicians who require additional knowledge of Basic 3D abdominal, small parts and vascular manipulation.
